

Student Enrollment & Course Management System (SECMS)

User Story: The Student Enrollment & Course Management System is a comprehensive Salesforce application designed to streamline and automate the academic enrollment operations of an educational institute. This system enables administrators, enrollment officers, and instructors to efficiently manage student records, course offerings, enrollments, instructor assignments, approval processes, payments, and reporting—all within a unified Salesforce environment.

1. INTRODUCTION

1.1 Project Overview :

This project aims to centralize all student, course, and enrollment-related data within a single Salesforce application to ensure easy data access, structured workflows, and accurate reporting. The system allows Enrollment Officers to manage student admissions, course registrations, and communication effectively, while instructors and administrators gain full transparency into course allocations and academic progress. The solution also enables automated instructor assignment, task creation, validation checks, and multi-level approval processes for enrollment management.

With Salesforce Flows, Approval Processes, Validation Rules, Reports, and Dashboards, the organization can ensure that all enrollment operations—from admission to course completion—are handled systematically and with continuous monitoring of key performance indicators such as enrollment volume, revenue, student status distribution, and pending approvals.

1.2 Purpose :

The primary purpose of SECMS is to replace manual and fragmented enrollment processes with a scalable, automated, and secure Salesforce solution that ensures:

Accurate student data management Structured enrollment workflows Automated approvals and validations Transparent reporting and monitoring

2. IDEATION PHASE 2.1 Problem Statement (Customer Problem Statement Template)

PS I am (Customer) I'm trying to But Because Which makes me feel PS-1 Enrollment Officer manage student enrollments efficiently enrollment data is scattered systems are manual and unintegrated frustrated and error-prone PS-2 Administrator track enrollments and revenue reporting is delayed data is not centralized uncertain in decision-making

2.2 Empathy Map Canvas User Persona: Enrollment Officer • Think & Feel: Concerned about double bookings and revenue loss • Hear: Complaints from

students and management • See: Multiple spreadsheets and emails • Say & Do: Rechecks data, follows up manually • Pain: Duplicate entries, approval bottlenecks • Gain: Automation, dashboards, faster processing

2.3 Brainstorming & Idea Prioritization Step 1 – Brainstormed Ideas • Spreadsheet automation • Standalone enrollment portal • ERP integration • Salesforce-based enrollment system Step 2 – Grouping • Manual solutions • Semi-automated solutions • Fully automated cloud solutions

Step 3 – Prioritization Salesforce-based SECMS was selected due to high feasibility and high impact.

3.REQUIREMENT ANALYSIS PHASE

3.1 Customer Journey Map Stages covered: • Awareness & Registration • Course Selection • Enrollment Request • Fee Payment • Approval • Instructor Assignment

- Reporting & Completion

3.2 Solution Requirements Functional Requirements

FR No Epic Description FR-1 Student Management Manage student records FR-2 Course Management Create and manage courses FR-3 Enrollment Processing Request, approve, reject enrollments

FR-4 Instructor Assignment Auto-assign instructors FR-5 Reporting Dashboards and reports

Non-Functional Requirements

NFR-1: Usability The system shall provide a simple, intuitive, and user-friendly interface that enables enrollment officers, administrators, instructors, and students to perform operations efficiently with minimal training. Navigation shall be organized through clearly labeled tabs, dashboards, and forms to reduce user effort and errors. Examples: • Quick student registration form • One-click enrollment approval • Role-based dashboards

NFR-2: Security The system shall ensure the confidentiality, integrity, and protection of student and institutional data through secure authentication, authorization, and access controls. Sensitive information such as personal data, enrollment history, and academic records shall only be accessible to authorized users. Examples: • Only admins can modify course details • Instructors view only assigned students • Students cannot access other student records

NFR-3: Reliability The system shall operate consistently and accurately without failures during enrollment processing, approvals, and reporting. Automation logic shall execute correctly to avoid duplicate or incorrect enrollments. Examples:

- No duplicate course registration
- Accurate status updates after approvals
- Consistent report generation

NFR-4: Performance The system shall provide fast response times for all operations to ensure smooth and uninterrupted user experience, especially during peak admission periods. Examples:

- Quick dashboard refresh
- Fast search for student records
- No lag during bulk uploads

NFR-5: Scalability The system shall support future growth in the number of students, courses, departments, and users without degradation in performance or functionality. It shall allow easy addition of new modules and features. Examples:

- Add new departments without redesign
- Handle increased admissions annually
- Extend to mobile or portal integration

NFR-6: Availability The system shall be continuously accessible to users during institutional working hours and must minimize downtime. The platform shall support high availability for academic operations. Examples:

- 24/7 cloud access
- Reliable during peak admission season
- Automatic backup of student records

3.3 Data Flow Diagram • User inputs student and enrollment data • System validates and stores records • Approval process routes data • Reports and dashboards consume processed data. The system processes enrollment requests, validates data, routes approvals, assigns instructors, and generates reports.

3.4 Technology Stack Layer Technology UI Salesforce Lightning

Logic Salesforce Flows Database Salesforce Objects Automation Validation Rules, Approval Process Reporting Reports & Dashboards

4. PROJECT DESIGN PHASE

4.1 Problem–Solution Fit SECMS directly addresses fragmented enrollment workflows by aligning user behavior, constraints, and automation using Salesforce-native capabilities.

4.2 Proposed Solution Functional Requirements

Parameter Description Problem Manual enrollment handling Solution Salesforce-based SECMS Novelty End-to-end automation Social Impact Improved student experience Revenue Model Institutional deployment Scalability Multi-department support

4.3 Solution Architecture The architecture integrates Salesforce objects, automation flows, approval processes, dashboards, and security layers.

5. PROJECT PLANNING & SCHEDULING 5.1 Project Planning • Agile methodology • Epics → Stories → Story Points • Sprint-based execution •
